OMEGA® push-in crimp-style contacts are manufactured from thermocouple alloy materials and are color-coded for easy identification. Contacts are crimp-terminated outside the connector assembly and inserted into the appropriate cavity by means of an insertion tool. They can be readily removed from the connector assembly using a special removal tool. Sealing plugs are available to seal unused positions in lieu of pin or socket.

## Important Notes

- MS Standard Assembly Tools are required to crimp and assemble connectors properly. Order with first purchase.
- Match pins and sockets to thermocouple alloys—Example: A 12-cavity connector carries 6 thermocouple circuits (pairs) requiring: 6 positive alloy pins or sockets and 6 negative alloy pins or sockets per body.
- Order bodies in mating pairs. Style MC mates with both style FF and style FC.
- Backshell cable clamps are recommended with each cord style connector.

## To Order
